

Session 2. Homework

1 Instructions

- This exercise must be implemented and submitted **at latest 24 hours before** your next laboratory class.
- Before submitting, rename the project in Eclipse (using Refactor → Rename) as

`surname1_surname2_name_lab02_game2048`

in lowercase and without accents.

Then, export the projects as `surname1_surname2_name_lab02` and upload it to the corresponding task in Campus Virtual.

2 Write tests and code for public methods `moveRight`, `moveLeft`, `moveUp`, `moveDown`

Import your implementation for lab01 and rename it to `surname1_surname2_name_lab02_game2048`.

Rename packages `lab01` to `lab02`.

Then, write both correctness and robustness JUnit tests for

`public void moveRight()`, `moveLeft()`, `moveUp()`, `moveDown()`

To implement the tests it could be useful to use `assertArrayEquals`. **Notice the checklist provided.**
